APPENDIX

--1(twice amended). A method for displaying programming information, comprising:

(a)   displaying a video comprising a plurality of frames on a portion of a display;

(b)   displaying a first panel in response to a first signal from a user interface, said first panel being displayed on another portion of said display simultaneously with said video, [said first panel being displayed on another portion of said display simultaneously with said video,] said first panel containing information from at least one of a plurality of records, said records containing programming information, each of said records having an associated time and an associated channel, and said first panel having an associated time range <u>from a first time to a second time</u> and an associated range of channels;

(c)   selecting a first record in response to a second signal from said user interface;

(d)   selecting a second record in response to a third signal from said user interface, where said second record has an associated time and an associated channel, where said associated time of said second record is outside of said associated time range <u>of said first panel</u>; and

(e)   in response to selecting said second record, displaying simultaneously with said video a second panel, said second panel having an associated time range <u>from a third time to a fourth time where said third time is the</u>

same as said second time and said fourth time is not the same as said first time [that is different than said associated time range of said first panel], and said second panel having an associated range of channels that is the same as the associated range of channels of said first panel.

2.   The method of claim 1 [wherein said first and second panels are information banners] wherein said associated time range from said first time to said second time encompasses the entire said first panel, and said associated time range from said third time to said fourth time encompasses the entire said second panel.
